PRODUCT BRIEF / CLIENT SOLUTIONS

Craft Management System

Local network-equipment configuration and diagnostics

CATEGORY	Standalone Application, Visual C++
FOCUS	Device Management
AT A GLANCE	Engineering tools for bring-up, testing and service operations.

Overview

Craft Management System (CMS) is a desktop application for configuring and diagnosing individual modules in nodes, hubs and chassis, including manufacturing and engineering test environments.

Key capabilities

- Local setup, board bring-up and module diagnostics
- Firmware and FPGA upgrade workflows
- Alarm setup and testing of equipment conditions
- RS232 and USB interfaces for module management
- Headend deployment for remote monitoring of limited nodes

Technologies & platforms

Visual C++ / MFC / Win32 / USB / RS232 / SCTE HMS

Practical benefit

Support practical board bring-up and technician workflows with direct equipment connections.
